FAIR-Aware: - assess how much your datasets are findable, accessible, interoperable, and reusable

Welcome to FAIR-Aware!

**FAIR-Aware is an online tool which helps researchers and data managers assess how much they know about the requirements for making datasets findable, accessible, interoperable, and reusable (FAIR) before uploading them into a data repository.**

**The tool comprises 19 carefully designed questions**, each generously supplied with additional information and practical tips which extend your understanding of the FAIR principles as they demonstrate how making data FAIR can increase the potential value and impact of your data. Taking yourself through the [FAIR-Aware](#) process will not provide a score for the FAIRness of a particular dataset, but to get the most out of it you should have a target dataset in mind!

---

[FAIR-Aware](#) has been developed by **FAIRsFAIR partners** [DANS](#), [DCC](#), [UniHB](#) and we've done our best to make using it as simple and time-efficient as possible. We're looking to make further improvements so you'll notice that some of the questions are directed at users. All feedback received will be taken on board and incorporated into a final version. An **interim report will be published in September** detailing what we've learned from this initial phase and explaining the upgrades we have in mind.
