

ExPaNDS Develops a Data Policy Framework for National Photon & Neutron Research Infrastructures

Implementation story by

ExPaNDS

European Open Science Cloud Photon and Neutron Data Services

29 June 2021

The European Open Science Cloud (EOSC) Photon and Neutron Data Service (**ExPaNDS**) project aims to expand, accelerate, and support the data management and data services provided through the EOSC for national Photon and Neutron Research Infrastructures (PaN RIs).

By considering the FAIRsFAIR Policy enhancement recommendations, a set of practical, policy-related recommendations based on a recent analysis of the FAIR data policy landscape and the actions set out in the Turning FAIR into Reality (TFiR) report, ExPaNDS was able to use and apply some of the FAIRsFAIR recommendations that fit to the project.

They've told their experience in an Adoption story, part of a series that we are bringing to you here
