

Date:
05 November 2021
Location:
Virtual

Our research data are critical to our work. We don't always document them as well as we should. If we restructure our thinking that our research data are just as important a contribution to the scientific record as our peer-reviewed papers, then what would "well-documented" data look like? Our speakers **Joy Davidson (University of Glasgow and FAIRsFAIR)** and Eva Méndez will share current work on helping researchers improve their data documentation (i.e., metadata) and give us reasonable steps as societies to help encourage our researchers with their own documentation practices.

This series is supported and guided by these collaborating societies and federations:

- AAAS/Science
- American Astronomical Society
- American Chemical Society
- American Geophysical Union
- American Meteorological Society, Board on Data Stewardship
- British Ecological Society
- Council of Scientific Society Presidents
- Ecological Society of America
- Federation of American Societies For Experimental Biology
- Federation of Associations in Behavioral and Brain Sciences
- International Union of Pure and Applied Chemistry
